

Cognition Chain

I will input the individual's expression to you, please infer whether the individual is stressed. Note that you should explain the process of stress generation **step by step**. Specifically, Please perform a **4-step reasoning** process as follows: ...

Self-Reflection

I will input an individual's expression and the corresponding 4-step reasoning process to infer whether the individual is stressed. There exist some error in the steps. Please **reflect on each step** and then generate a new 4-step reasoning process for the expression.

Answer-Reflection

I will input an individual's expression, the corresponding 4-step reasoning process used to infer whether the individual is stressed, and the **real stress state**. The provided reasoning process is incorrect. Please reflect on the errors in it and then generate a correct 4-step reasoning process based on the real stress state.
